

Just a quick visual proof to show why $1+2+3+\dots=-1/2$

I'd assume because macro and micro are akin to charge, least in my Circle Math, that half of infinity after infinity would then switch charge & scale becoming the famous $-1/2$.

Tho then its possible half of 1 after 1 becomes 2 or -2 which idk yet. $1/1+1/2+1/3+\dots=2?$ $-2?$ That doesn't look right.

$1/1-1/2+1/3-1/4+\dots=2$ seems to be more likely correct. The scale charge flipping of circular math is quite confusing.
