

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

Baseline wave equation:

$$\psi = e^{\text{Neutral Orbit, Charge, Energy, Rotation}}$$

$$\psi = e^{(\phi^q) * f(P_n - 1) * (\frac{\pi}{n^{(P_n - 1)}} - \frac{\pi}{12}) * \theta}$$

Results:

$$\frac{x^2}{[(\phi^q) * f(P_n - 1)]^2} + \frac{y^2}{[\frac{\pi}{n^{(P_n - 1)}} - \frac{\pi}{12}]^2} = \theta$$

ϕ =Golden Ratio Neutral Orbit

q macro micro selector using -1 for micro, +1 macro, or 0 for $(\phi^0)=1$

P_n =Primes

$$f(P_n - 1) = P_n(P_n - 1)(P_n - 2) \dots (P_n - (P_n - 1))$$

If you're confused idrc. This stuff ain't "Hogwash", I solved it. I hate y'all's dependency on the emergent +i. e is likely more foundational as the neutral circle rotates " ϕ " around 0 on a golden ratio spiral, flipping inside out. If y'all want proof here it is.

Please enjoy the math! It's more fun and inclusive than people think. I'm bad at math; y'all can do so much more.

My Circle Math aka Math 2.0 works:

Circumference:

$$C = 2\pi \cdot \left[\phi^q \cdot f(P_n - g(P'_n)) + \left(\frac{1}{n^{(p_n - g(P'_n))}} - \frac{1}{12} \right) \right]$$

Aka $f(P_n - 1)$ so 2 states of 3D is $3 - 1 = 2$ or full 3D is $f(2) = (P_n - 0)(P_n - 1)(P_n - 2) = 6$

$$C = \pi \cdot [a + b]$$

The Volume Formula:

$$V = \frac{4}{3} \cdot f(P_n - g(P'_n)) \cdot \pi$$

Instead of multiplying arbitrary static axes ($a \cdot b \cdot c$), you replace the axes. Use a 3D Core Triad ($P_n = 3$) at a neutral orbit state with no nested sub-operations ($g(p'_n) = 1$):

- Step 1: Determine states:

$$f(3 - 1) = f(2) = 2 \times 1 = \mathbf{2} \text{ states}$$

- Step 2: Plug your active 2-state gear radius straight into the master volume multiplier:

$$V = \frac{4}{3} \cdot (2) \cdot \pi = \frac{\mathbf{8}}{\mathbf{3}}\pi$$

Calculating Higher-Dimensional Volume:

$$V_{5D} = \frac{4}{3} \cdot f(5 - 1) \cdot \pi$$

$$f(4) = 5 \times 4 \times 3 \times 2 = \mathbf{120} \text{ states}$$

$$V_{5D} = \frac{4}{3} \cdot (120) \cdot \pi = \mathbf{160}\pi$$

Wonder is clearly a better approach than smashing rocks together, hoping to see what's inside. Or spending lottery winnings on a tuition to simply learn. Y'all saw an infinite wall, while I saw a chain linked fence I could simply climb over or cut through.
